

python

```
1  class Solution:
2      def sortedSquares(self, nums: List[int]) -> List[int]:
3          list_for_numbers=[]
4          for number in nums:
5              number=number**2
6              list_for_numbers.append(number)
7              list_for_numbers.sort()
8          return list_for_numbers
```
